Category: CNC post-processing software Category: 3D computer graphics softwareReview of the ferric iron reduction potentials of sulfate-reducing bacteria. The standard electrode potentials of the reduction of iron(III) by sulfate-reducing bacteria have been determined for a variety of conditions. The values for Fe(II) production in 50 mM phosphate buffer were $E^{\circ}(\text{Fe(II)}) = -0.051 \text{ V}$ vs. NHE at pH 7.0 in anaerobic conditions (T = 30 degrees C). The values for Fe(II) production under anaerobic conditions are
