## Super Usb Cassette Capture Software Free 14 LINK

A: Inputting a serial port is pretty easy on Linux, there's some good Howtos here. As for capturing audio... I would look at Audacity, or any other ASIO like applications. ASIO is basically just a fancy name for "sound card" drivers. Introduction ===== Allogeneic haematopoietic stem cell transplantation (HSCT) is used as treatment for various malignant and non-malignant conditions; it requires induction of conditioning that in most cases is myeloablative. Our aims were to describe the conditioning protocol and outcomes of HSCT in patients  $\geq 60$  years of age. Methods ===== We undertook a retrospective analysis of 59 patients (36 men, 23 women) who underwent HSCT between 2004 and 2013. Fourteen patients were diagnosed with malignant diseases, 27 with non-malignant diseases. Conditioning was myeloablative in all cases (busulfan/cyclophosphamide or melphalan/TBI). Median age at transplant was 60 years (range 60-79 years). Acute GVHD prophylaxis was ATG and cyclosporine; chronic GVHD prophylaxis was tacrolimus. Results ===== Overall survival after transplantation was 61%. Overall cumulative incidence of death of any cause was 39%; the respective probabilities for patients with malignant disease and those with non-malignant disease were 39% and 25%, respectively ( $p = 0.038$ ). The probabilities of transplantation-related mortality were similar in both groups (12% and 7%, respectively). Survival curves for patients with malignant disease and non-malignant disease were: AML,  $68.5\% \pm 3.4\%$  and  $87.3\% \pm 2.5\%$ , respectively; MDS,  $65.7\% \pm 3.7\%$  and  $84.4\% \pm 3.3\%$ ; MM, 25% and  $85.7\% \pm 3.8\%$ , respectively; non-malignant diseases: AML,  $71.9\% \pm 2.7\%$  and  $87.3\% \pm 2.5\%$ , respectively; MDS,  $60.9\% \pm 4.4\%$  and  $84.4\% \pm 3.3\%$ ; CLL,  $85\% \pm 5.5\%$  and 100%; respectively. The probabilities of relapse after transplantation were: malignant diseases,  $16.9\% \pm 6.7\%$ ; non-malignant,
