KEYMACRO is a keyboard macro recording program that can be used to record any series of keystrokes in a text file. KEYMACRO is part of the Classic Mac OS package, but you can easily install it on Windows as well. Keyboard shortcuts can help to reduce the time it takes to type a series of commands, or open a program with just one click. One of these shortcuts is CTRL+SHIFT+B. With this combination, you can quickly create a blank line in an application's text editor. But,

keyboard shortcuts are not limited to the use of the keyboard. For example, you can use the `CTRL+ALT+LEFT` and `CTRL+ALT+RIGHT` shortcuts to rapidly navigate between the last two menu items in a dialog box. And you can use `CTRL+SHIFT+DELETE` to rapidly open the Find and Replace dialog box. Moreover, you can use the `WIN+SPACE`, `WIN+ALT+SPACE`, and `WIN+ALT+NUM` shortcuts to quickly create new tabs in your favorite browsers. The program interface is pretty clean and well organized. You can easily find the settings and even jump to the help

files for more information.

KEYMACRO comes with a simple but efficient Help system and an extensive list of options. You can quickly create keyboard shortcuts for recording several events, such as opening a file, starting a specific program, or launching an application. You can also create groups of keyboard shortcuts that can be used for a variety of tasks, such as quickly editing several lines of text in a word processor. Keyboard shortcuts can also be used to quickly open several programs, such as a music player, chat program, and instant messaging

client. In this way, you can save a little time and have all the programs at hand at once. You can assign several programs to each keyboard shortcut, and use **CTRL+SHIFT+NUM** to quickly switch between them. If you have dozens of shortcuts you use frequently, you can assign them to a keyboard shortcut group, which is a convenient way to keep track of all of them. More and more features are being added to **KEYMACRO**, so it's definitely worth checking out. Misc. Key Features: · Supports OS X 10.5 and later · Has keyboard shortcut

settings · Has keyboard shortcut
groups · Supports 2,048 shortcuts ·
Supports upto 32,768 keystrokes ·
Has a rich history of enhancements
and improvements · Support
