What's New In FTPHoover?

FTPHoover is a free program for automatic download of pictures and movies from ftp servers. FTPHoover

will help you get the desired files from any ftp server. Here are some key features of "FTPHoover": ⬜ Automatic download of files you don't have. ⬜ Duplicates are avoided, even if renamed. ⬜ Movies are resumed, even if renamed. Requirements: ⬜ MySQL This project do automatic download of files, using the command FtpHoover! The FtpHoover command takes as parameter an FTP server, with the domain name of the server. When there are more than one domain names on this server, the program uses the domain name you

specify. For exemple, if you specify the domain name "youtube.fr", you can get videos from youtube or any youtube.fr domains. By default, the configuration file is on the root folder of the FTP server, but you can change it by using the parameter file in the command. You can use the parameter verbose to see the names of the files detected, if you use the getFirst file technique, otherwise, you see nothing. You also specify the directory where you want to save the detected files. This project do automatic download of files, using the command FtpHoover! The

FtpHoover command takes as parameter an FTP server, with the domain name of the server. When there are more than one domain names on this server, the program uses the domain name you specify.
