Waka Waka Screen Saver is a simple animated screensaver that will give a fresh new look to your desktop when you're away from your computer. The screensaver will display the logo of the South Africa 2010 World Cup and play the official anthem Waka Waka by Shakira. A new year? A new Windows operating system? Either way you look at it, the chances are that you're about to fall into a trap. In fact, you're doing it right now. In the last year, millions of people have upgraded their computers and now they're going to be prepared for the arrival of the new Windows 7. Windows 7 is Microsoft's latest operating system and its general release is expected in the summer. And that means the last few months will see a whole load of changes to the OS. Microsoft have been keeping quiet about the changes and it's likely that people will be none the wiser about what the new features are. In fact, it's difficult to find information about the changes when you search for Windows 7 information. In an effort to stop people falling into this trap we've compiled a short list of the features in Windows 7. And we've also found a few little known (and less obvious) features of the new OS. So, what's new in Windows 7? 1. More secure Windows 7 will be more secure than previous versions. The OS will be more restrictive and will only allow you to access what you need to. Users will no longer be able to see information about themselves (that is, if you've allowed your account to be set up as an administrator). Data will also be more secure with data stored in the cloud and data backed up with a client such as Microsoft Office Live. 2. Power more efficient Windows 7 is expected to use less power than previous versions and should be more efficient too. This means that your PC will use less power when it's running. It's already been revealed that Windows 7 will now use less power when in sleep mode and will be more efficient when it's using the CPU (central processing unit). 3. Less Internet Explorer IE is going to be put to rest for Windows 7 and the only version of Internet Explorer that will be available in the OS will be 8. 4. It will be easier to find documents and more familiar to Windows XP One of the things that people are most likely to notice is how Windows 7 is going to look.

This program has been created to be used with Windows 95, Windows NT, Windows 98, Windows Me and Windows 2000. The program was created with Windows NT in mind because it is the operating system that is currently used most by business. The program may not function on Windows 98. Installation Instructions: 1. Open a command prompt and type "install" and then press enter. 2. To use this program, double-click on the file with the extension.exe. The program will then open. Although you can use this program on any computer, because the program is so simple to use it is recommended that you use your computer at home and a portable computer for work. In this manner, you may create and use different records in one program on your computer and separate records on your portable computer. The first time you run the program, you will be asked for a user name and password. Enter your user name and password and then press OK. The next time you run the program you will be able to select any of the previous records you created and will be able to create new ones. The program will keep your records for you. You may have the program open in two windows, one for your checking accounts and one for your credit cards. For more information on using this program, open an Internet Explorer window and navigate to the program's Web site. Tips: 1. If you want the program to create new records for you, make sure you have a current checking account on file. 2. You can choose which bank to deposit checks in by opening a new window in the program and setting your payee as the bank's name. 3. You may access this program from any computer. Credits: Awards: Reviews: 1. I thought this was a good program. It was easy to use and allowed me to keep track of the various checking and savings accounts I have. However, I do not like the way it automatically goes to a new screen to display new records. I would prefer it to remain in the same window and just keep track of my records. 2. The program was easy to use. I like how I can create or delete new records. 3. The program was easy to use. It took just a few minutes to learn how to use it. 4. The program was easy to use. I was glad to find it because I wanted to keep track of my checking and savings accounts. 5. The program was easy to use and I like how you can create and delete new records. 6.
