The program itself does not have an ini file and ini files are not included. Please download RASAero for more ini file settings. You may also use the ini files included with RASAero. The default settings is to trim the left side of the desktop to 800 pixels. You may also trim the right side by 5 pixels, or the bottom by 25 pixels. You may also remove the top and bottom toolbars, or trim from the left, right, top or bottom of the desktop work area, or from all toolbars. Settings may also be saved, and the program will also be saved as a "settings" ini file. Please use the RASAero ini file manager to create your own ini files, if you need more settings. You can also trim from your desktop by right clicking on it and choose the trim option in the popup menu. To stop trimming the desktop, simply click the button again. You may also enable and disable the utility at any time by using the check boxes in the tray. You may also click the button in the tray to bring up the tray options. There is also an option to show only certain applications in the tray. If your application is not listed, right click the tray and choose options. You may also change the color, size and position of the tray icon. The program tray icon may also be moved to any corner of the desktop or taskbar. The program tray icon may be made transparent, using a bright background color. Please enable the "No Tray" option in the tray options, if you don't want the tray to show up. When using AutoHide to hide your toolbars or other windows, the work area will automatically be trimmed down. You may disable this from the tray options. The AutoHide Trimming may be turned off if you want to leave the work area untouched. You may also remove the trimming of the desktop, taskbar or toolbars by clicking the button in the tray to remove the button. Please enable the AutoHide Trimming option in the tray, if you want to see the trimming of the desktop, taskbar or toolbar. The trimming of the desktop, taskbar or toolbars can also be turned off at any time. Please disable the AutoHide Trimming option in the tray, if you don't want the trimming of the desktop,

KEYMACRO MANUALS: Kees has finally released his new tool for you to use called Keymappack! This software allows you to easily make you own Keymappings! Now you can easily customize your keyboard shortcuts to things like opening programs, opening folders, displaying quick access items, etc. There is plenty of documentation and tweaking on how to get things setup the way you want. Keymappack is even free! Get Keymappack and see what it can do for you!

You can find these upgrades [HERE](#). We will be continually updating and expanding this list as we go so you can always check back to see if there are any new updates available. We even have a full review of the new software [HERE](#) and it has received rave reviews! Our current VSS Upgrade prices are as follows: The Installer: \$5.00 VSS Patches: \$2.50 per Patch VSS Uninstaller: \$5.00 Keymappack: FREE Get the Upgrade Now! New - 06/13/2010 - Version 2.0 is now available! Some very minor changes have been made to the program that should help with some problems that some users were having with the VSS 4.0.0 upgrade. Hopefully this fixes it for some of you as well! **LINKS:**
Disclaimer: The above list is not an endorsement from any application or piece of software! I am simply listing some that I find to be useful or unique! If you think you have found something that is missing from the list, let us know! Most Popular Games Latest Comments jadedlolterrain: "Do you actually keep working at it? There is always room for improvement. I recommend that you should use a different image editor, one that doesn't have the burden of a large team supporting it. If you're comfortable with the basics, then I recommend that you go to the GIM 77a5ca646e

TinyTrim Work Area is a simple utility that allows you to trim from the Left, Top, Right and Bottom of the desktop work area by a number of pixels using ini file settings. This only effects the area used when a window is maximized. It doesn't keep applications from moving into the margin area. You may find it useful especially if you use toolbars that auto hide, or if you have your taskbar set to auto hide. Get RASAero and take it for a spin to see what it can actually do for you! Manual License Get RASAero and take it for a spin to see what it can actually do for you! v0.2.2 Corrected issues with.ini settings v0.2.1 Corrected issues with.ini settings v0.2.0 Initial release Release Date Download RASAero License Agreement RASAero is free software. We want to make this a one stop shop for high quality freeware. We also don't want to bloat the sizes of our downloads, so this.exe installer does not include support for.zip and.7z archives. RASAero installation requires you to uninstall any previous version of RASAero and all associated component packs. RASAero Copyright RASAero and all its component packs are freeware; we ask you to give back to our community by using, and contributing to, it. You may create an account in the forum to contribute, but only if you aren't already a member. Download The below ZIP file is the latest version of RASAero as of July 6th 2017. You may also download the zip archive here.Author Topic: Who is YOUR favorite character? (Read 168 times) I have trouble picking a favorite character. I do have my favorites, but I don't know if they will be yours. In the Aftermath books, Cynthia is my favorite. She's sweet, she has a great, sexy body, and she always comes through for Luke and the others. In the Timeline books she's great, and I liked her quite a bit in the Trial Run books. In The Shadow Campaigns, she also was very fun, but she was a bit annoying in the first book.

What's New In Trim Work Area?

Trim Work Area allows you to trim from the Left, Top, Right and Bottom of the desktop work area by a number of pixels using ini file settings. This only effects the area used when a window is maximized. It doesn't keep applications from moving into the margin area. You may find it useful especially if you use toolbars that auto hide, or if you have your taskbar set to auto hide. Get RASAero and take it for a spin to see what it can actually do for you! Maintainer: Mark Usher Downloads: What's New in this Release: Version 4.0.8 (Build 240) Fixed bug when an application is on top of the desktop and then window starts on top. Version 4.0.7 (Build 233) Fixed bug when the desktop edge is on the bottom of the screen, minimizing a window will cause it to be moved to the top. Version 4.0.6 (Build 230) Made the background image viewable while recording. Version 4.0.5 (Build 226) Added a check that ensures the settings window is updated when a new ini file is used. Version 4.0.4 (Build 225) Added ability to set the image used in the background image view to a file. Version 4.0.3 (Build 223) Added an option to the ini file to allow you to have Windows/Linux style window frame with title bar and a border. Version 4.0.2 (Build 222) Fixed issue where the menu bar wasn't being automatically added to the application menu. Version 4.0.1 (Build 221) Added option to automatically add the menu bar to the application menu. Version 4.0.0 (Build 220) Version 4.0.0 is out! Version 3.1.0 (Build 176) Added option to trim from the Left, Top, Right and Bottom of the desktop. Version 3.0.6 (Build 171) Added ability to make the menu bar on top of the window. Version 3.0.4 (Build 169) Added ability to trim from the Left, Top, Right and Bottom of the desktop. Version 3.0.3 (Build 168) Added ability to set an image for the background image view. Version 3.0.2 (Build 167) Fixed bug in menu width calculation. Version 3.0.1 (Build 164) Fixed bug in trimming. Version 3.0.0 (Build 163) Version 2.0.0 (Build 158) Version 2.0.0
