With the help of this app, you can also edit audio files. Also, if you are using Windows 7 or above, you can share audio files directly from the app. To this, you can also record audio and add effects to your music. Similar to RipperX, this app also has a storage space called the 'MCI-Folder'. It provides you with a place to stash music that you are not going to listen to. The MCI-Browser is also able to play and record audio and can be used in a perfect way to listen to music on a PC. It will even burn audio CDs and import MP3 and WAV files. The app also has an Internet radio with BBC and Shoutcast. Plus, it has various songs by artists like The Beatles, Elvis Presley, Van Morrison, Bob Dylan and Pink Floyd. There is a toolbar that has a combination of functions that can help you play, view and organize your audio tracks. As you can see, you can change the views and create a new playlist for a particular song or album. MCI-Browser has more than 700 samples and can be used as a fantastic decoder for old audio files. It provides help as well as information on the tracks and helps you to find your way around. This application is ideal for Windows XP, Vista, 7, 8 and 10. Download MCI-Browser MCI-Browser for Mac The application is based on Safari so it works on Macs. While you can use the standard Safari app to play audio files, they are not able to play them from discs as well.
