GeoVisu is a utility designed to convert GeoTiff files into geographic coordinates and other types of map data. It can process multiple GeoTiff files at the same time. The program has the following features: The ability to view GeoTiff files in GIS-compatible files such as PDF, PostScript or MapInfo TAB files; Imagery, graphics, vector data: the program displays general maps, digitized terrain, contour lines, orthophoto, vector image, blueprints, overlays, contour lines and vector drawings; The ability to view/edit GPS traces; The ability to process layer and data files such as GeoTiff, Shape, and ESRI shapefile files. GeoVisu is suitable for professional, commercial, and educational users. GeoVisu uses only 1.5 MB of memory when run. GeoVisu supports all GPS units that can work in the TCP/IP protocol. Functional description of GeoVisu GeoVisu lets you view and edit images, graphics, GPS traces, and other types of files in any way you want. You can choose to view data in the map window, GPS window, or both. If you have multiple sets of data you can combine them into one file. The program is a universal, Windows-based utility that lets you open image files from GeoTiff, GeoPix, and other formats, as well as satellite maps from MapInfo and ESRI. It lets you display a map of the world, a satellite map, or a list of your GPS trace points. You can see the GPS points in 3D coordinates and even edit their coordinates. You can select GPS points by either clicking on the left or right mouse button to draw a line and then clicking on the point where you want to view it. You can also click on the map to view GPS points. When a trace is drawn on the map, you can export its points to the clipboard. You can also open files with the points or plot the points onto the map using polygons, lines or circles. You can also export map and track data to paper or PDF files. You can zoom in and out of the map window with the mouse wheel or with the help of the buttons that appear in the bottom right of the window. You can also change the rotation of the map by

GeoVisu for Windows Download : GeoVisu Suite , GeoVisu + Map Creator, GeoVisu Express, GeoVisu for Mac the update process is very slow on Windows 7 and I have to do a clean install of Windows 7 in order to resume using this software. On Windows XP I am using Real Time Driver, all other drivers are ok. May 15, 2014 by Tabata Recommended if you want to use other applications concurrently Excellent software. Very fast and stable. In my experience, you can't beat it. It's been a good companion for GPSdroid, and I am looking forward to using it more with Monotour and in the future with my automatic vehicle tracking system. Apr 19, 2013 by 818 Very good! But don't pay attention to other reviews that say their GPS stopped working after the update or the upgrade...I haven't had that. Apr 19, 2013 by Imho I like the program. I would like to be able to update to the newest version that it came out with. Apr 15, 2013 by Cederholm The program can work. All the work is there, the rendering is excellent. The problem is that the sound is all wrong. In the original version, the sound is stereo, in the new version it is mono, and a very poor sounding mono. Mar 24, 2013 by Frazzetta I'm disappointed with the update. The reason for the dissatisfaction is that the I still have problems with the graphing function. The speed of the update has almost made my software no use. I have now and then the problem that the map is scrambled. I have to repeat a lot of steps. Jan 17, 2013 by ORADI I have no problems with the program but sometimes it makes so the GPS is not working for some reason. I have tried to make a factory reset without result. I have reset by controlling, it restarts the system
