
Download Arabic Text Script After Effects

This is what you choose in preferences like: So if you have a text layer created using the Latin text engine, you cannot insert Arabic ... But if you use Arabic characters with the Latin text engine, you can insert Arabic. And that's because you have no support for Arabic in the text engine. And if you want to write something that doesn't include the Arabic characters, you have to write something that doesn't include the Latin characters, or you can write a font (something like TrueType) that uses Arabic as its characters and use it as a font ... It's very simple
