Autodesk was founded in 1970 by John Warnock and his partners Alan Kay, John Warnock, and Yorick Wilks as Kayo Wilks Computing. The company started as a venture-backed startup, and early investors included venture capitalists Leisz and Worthington and Apple co-founder Steve Wozniak. The company was spun off from MIT in 1983. At its initial release, AutoCAD was only available as a desktop application for the Apple II. Its first competitor in the CAD field was AutoCAD LT, a Microstation-based CAD application, which was introduced by Micrografx in 1984. In 1990, Micrografx was acquired by Autodesk. AutoCAD was expanded to run on Windows PCs starting in 1991. By the late 1990s, AutoCAD was the most widely used CAD application in the world. There are more than 220 million AutoCAD drawings and over 200 million CAD users around the world. Because of AutoCAD's status as the world's most widely used CAD application, Autodesk has had to devote considerable resources to ensure the application's future and to prevent it from being replaced by new applications. Recent years have seen Autodesk continue to develop AutoCAD, as well as introduce enhanced products such as AutoCAD 360. The company's main product development group is Autodesk VX (Visualization and Enhancement). In October 2018, Autodesk changed its name from Autodesk Inc to Autodesk, Inc. Autodesk was named one of the top 50 great companies to work for by Fortune magazine in 2014. The company was named the "Corporate Social Responsibility Leader" by Corporate Responsibility Magazine in 2017. The official AutoCAD product line includes AutoCAD software for desktop and mobile platforms, AutoCAD360, AutoCAD LT, Design Review, DWG2DXF, and both AutoCAD Architectural and AutoCAD Mechanical. History A preliminary version of AutoCAD was developed by John Warnock, Alan Kay, and Yorick Wilks as Kayo Wilks Computing (KWC). KWC was the MIT spinoff company formed in 1970 by Kayo Wilks, John Warnock, and Yorick Wilks, which spun off Kayo's Kayo Wilks Associates (KWA) (Kayo, Wilks, & Wilks, 1972).

User interface and look-and-feel Starting with AutoCAD R13 (2009), a new interface, known as the Ribbon Interface, was introduced. The Ribbon Interface is presented as a tabbed panel. It consists of five main tabs, which are: Home, Drawing, Modeling, 3D and Utilities. In AutoCAD R15 (2011), the ability to customize each tab and the tab order was added to the Ribbon Interface. Autodesk also introduced Modifyability, which allows users to customize the ribbon panels to match their preferred preferences. Starting in AutoCAD R18 (2012), the Ribbon Interface can be customized with the command 'Customize User Interface' on the View menu. AutoCAD 2010 introduced a new look and feel called the New Look. In AutoCAD 2012, users can customize the look and feel of the interface, including the 3D view and drawing pages, with the New Look, which is a new look and feel for AutoCAD 2012. In AutoCAD 2014, a new User Interface was introduced as part of the New User Interface, "AutoCAD 2014". The New User Interface consists of a dark or light background and a canvas using a radial gradient color. It is presented as a tabbed panel with each tab representing an aspect of the drawing, such as the drawing view, 3D view or ribbon interface. Users can customize each tab to their preferences, and can set the tab order to the interface they prefer. In AutoCAD 2016, a new User Interface was introduced as part of the New User Interface, "AutoCAD 2016". It is a new look and feel for AutoCAD 2016. In AutoCAD 2017, a new User Interface was introduced as part of the New User Interface, "AutoCAD 2017". It is a new look and feel for AutoCAD 2017. New user interface Starting in AutoCAD 2009, users could make customizations to their user interface. In previous releases, this was not possible. Starting with AutoCAD 2009, customizations to the user interface are done using the "New User Interface" feature, which is made available from the "Customize User Interface" dialog. In AutoCAD 2010, the customizations made to the interface are categorized into four types: Interface, Ribbon, Dialog Box and Page. Today was a special occasion and my family decided to go out for dinner. I love eating out, especially when we can eat vegan. I love trying new restaurants. I decided to go to a restaurant I had not been to in a while. I had no idea what to expect from the restaurant, other than it was supposedly good. I got dressed up for my date, we headed over to the restaurant and as soon as we sat down, a dude about a head shorter than me was staring at me, telling me I had nice legs. When he told me he had been staring at me because he was checking me out, I told him that wasn't what I was doing. He looked at me like I was crazy and told me I should be flattered. I told him I wasn't flattered. He told me I was going to enjoy the rest of the meal and leave it at that. The rest of the meal was great. We had a delicious soup and salad. My food was great and I was enjoying my meal. My date decided it was time to leave after only about an hour and a half. When we were in the car on the way back home, he told me he was going to beat up the guy who was staring at me the whole time. I told him I didn't care because I didn't care that people were staring at my legs. My date told me that I am privileged, how can I be privileged when no one looks at me and that men stare at me because I am a woman. I told him that men look at me because I am a woman, not because I am a woman with nice legs. He told me that I am very thin privilege, because I am thin and men don't stare at me and stare at my butts. I told him I don't care what he thinks about my butts, I told him that men are not staring at my butts. He was disgusted with me and started crying, telling me that I was being very disrespectful and rude and that I didn't appreciate the fact that men stare at my butts. I

## What's New In?

With AutoCAD, you no longer have to use separate drawing programs. Work within AutoCAD to quickly start your drawing or quickly import and show the feedback. Data Integration: With Direct Design Data, connect to any external data source, import 3D models from other applications, or create your own data. This data can be used in AutoCAD drawing or web based applications to complete complex projects. The new report browser is a powerful report designer that allows you to work with any format such as .rpt, .doc, .xls, .pdf, and many other file formats. Powerful reporting: With Direct Design Data, you can also generate an unlimited number of report styles from existing report formats or create new report styles using JavaScript. Multi-view Geometry: With Multi-view Geometry, you can create detailed 2D representations of 3D geometry. These multi-view geometry files can be opened and viewed in AutoCAD. AutoCAD includes the new multi-view geometry capabilities in AutoCAD 2023, making it easier to work with 3D geometry. The multi-view geometries are a new way to view geometry, and even annotate and edit the geometry in AutoCAD. Multi-view Geometry (video: 7:35 min.) This video shows how you can create detailed 2D representations of 3D geometry. Interactive Rectangular Diagram: Instead of working with only 1D geometry, interactive rectangular diagrams are now easy to create. You can add attributes to each segment, manage the dimensions, and even add a status bar. Interactive Rectangular Diagram (video: 1:11 min.) This video shows how you can create interactive rectangular diagrams in AutoCAD. Whole screen level selection: You can now change the selection of the entire screen with a single selection. Whole Screen Level Selection (video: 4:30 min.) This video shows how you can select everything on the screen with a single selection. Multi-process drawing: With Multi-process drawings, you can keep creating and making changes to the same drawing while others are working. Multi-process Drawing (video: 3:55 min.) This video shows how you can enable multi-process drawings in AutoCAD. Add context to annotations:
