## TrayPerf (2022)

When i noticed some programs were using a lot of CPU and bandwidth, i opened up my Xfce4 desktop and saw a lot of processes running that were eating 100% of my resources. I was surprised how much time was being used when i was sitting idle, and then i got a little curious about what was going on. Looking through the task manager, i didn't see anything i hadn't heard of, so i decided to look at my system monitor and see what it showed. Sure enough, a program was using an exorbitant amount of resources. It was alright, the program was just using a lot of network bandwidth so i just came up with a fix for that and sent it off to the developers. What was strange to me was that i never really bothered looking at the system monitor before, so i thought it would be a great time to try to see what was going on. i've been making a lot of Xfce4 improvements over the last year and i couldn't think of a better program to use to test it than this. After downloading the program, extracting it to my home directory, and reading the README, it was so easy to set up and use. It's a simple program that's fast, lightweight, and lightweight, and has a clean and simple interface. All in all, i think it will serve as a good tool to look at what's going on with your computer when you're in the middle of something without interrupting you. How to install: 1. Install tray-perf: `sh PLUGIN-$(uname -m)_$(uname -r)_$(uname -s).sh -u 16-bit_$(uname -m).tar.xz` 2. Configure TrayPerf 2.1 Install TrayPerf Your installation is now complete! Quit the installer and move the plug-in directory to your `~/.local/share/applications` directory: `cd ~/.local/share/applications` `mv tray-perf.desktop ~/.local/share/applications/` 2.2.1 Create TrayPerf.desktop file The desktop entry files are written out to

---

~/local/share/applications/ in the format "name.desktop". Copy your newly created TrayPerf.desktop to this directory: cd

~/local/share/applications cp TrayPerf.desktop tray-perf.desktop

### What's New In?

TrayPerf is a simple system tray application for Windows XP that graphically illustrates the usage of CPU and Memory. It's useful for determining when a computer needs to be rebooted, when you need to install an update, and when system performance has become degraded. TrayPerf works with Windows XP, Windows 2000, and Windows NT. TrayPerf is the ideal application for customers wishing to know the current status of the system's memory and CPU usage. It's simply beautiful. TrayPerf has a nice, clean and simple interface that is easy to navigate around. As TrayPerf is a system tray application, it's perfect for your needs. You can easily view the current system performance conditions by either right clicking the TrayPerf icon in the system tray or by selecting TrayPerf from the Programs menu. TrayPerf works by displaying two graphs in the system tray: CPU Usage and Memory Usage. These graphs are dynamically updated in real-time to display the current system conditions. TrayPerf is easy to set up: To view CPU Usage: - Enable or disable CPU Usage Gauge by right clicking the TrayPerf icon. - Adjust the CPU usage graph limits. There are four available limits: Low, Medium, High, and High + Critical. To view Memory Usage: - Enable or disable Memory Usage Gauge by right clicking the TrayPerf icon. - Adjust the graph limits. There are four available limits: Low, Medium, High, and High + Critical. To customize TrayPerf: - Change the colors of the two graphs by going to TrayPerf

---

Options. - Change the background of TrayPerf to your liking. - Change the position of TrayPerf in the system tray. - Use TrayPerf on the desktop. If you wish to, TrayPerf can be placed anywhere on your desktop. TrayPerf on the desktop will not work in Windows Vista. Installation: - TrayPerf is available as a freeware installation. In addition, TrayPerf can be permanently installed on your computer for free or for a period of 30 days. If you wish to install TrayPerf permanently, please follow the instructions here. If you are interested in purchasing TrayPerf, you may do so by following the instructions here. Using TrayPerf: TrayPerf has two different views (displayed by either right clicking the TrayPerf icon

---
