Leawo Prof. Media 7.9.0.0 - SeuPirate Download Pc.This subproject is one of many research subprojects utilizing the resources provided by a Center grant funded by NIH/NCRR. The subproject and investigator (PI) may have received primary funding from another NIH source, and thus could be represented in other CRISP entries. The institution listed is for the Center, which is not necessarily the institution for the investigator. We have described the use of recombinant antibody arrays to measure the binding of a panel of recombinant monoclonal antibodies that target olfactory receptors on neurons in the olfactory epithelium. To understand the binding interactions of these antibodies with their putative antigen receptor, we measured the binding of each antibody to a recombinant human olfactory receptor. We are developing methods for staining olfactory receptors on neurons in the olfactory epithelium from human and rodent olfactory tissues for use in both immunocytochemistry and immunohistochemistry. Antibodies that show strong binding to a receptor on a subset of olfactory receptors will be further characterized for use in histological studies of tissue from human and rodent olfactory mucosa. The methods of immunohistochemistry and immunocytochemistry will be adapted to allow multiple labeling of multiple olfactory receptors simultaneously. Moreover, we will
